Providing clean and affordable electricity to homes and businesses

We design solar PV and hybrid systems to meet residential, commercial and community needs.

We deliver cutting edge innovative systems that drastically reduce our clients energy bills while also reducing their carbon emissions.

We empower local communities through innovative solutions and training to help them achieve resilience and self governance of their electricity supply.

Dr Tony Bittar and Ian Shearer were founding members of the New Zealand Photovoltaic Association (NZPVA) back in the year 2000. As New Zealand's leading solar energy scientist, Tony was appointed first chair of the Board. Ian, who was already part time manager of the NZ Wind Energy Association, was appointed as secretary of the NZPVA. In 2006 NZPVA members decided to change the name to what would eventually become fondly known by industry as the Sustainable Energy Association of New Zealand (SEANZ).

As directors of Front End Solar, Tony and Ian are true pioneers of solar PV in New Zealand and were ardent supporters of the technology and its future for many years while others were saying it would never work here. Front End Solar has unrivalled expertise when it comes to the design and implementation of solar energy systems for residential, community, commercial and industrial needs. Having consulted on many renewable energy and energy efficiency projects both locally and internationally, the company has a particular interest in harnessing the power of distributed solar energy technologies to solve challenges of energy governance and energy hardship at the local and community levels in New Zealand.

Front End Solar offers high level consultancy services for solar and storage systems integrated with other renewable technologies for on-grid and off-grid requirements. We also provide expertise for cutting edge innovations including microgrids and energy sharing options for communities that wish to explore their energy independence.
