RIYADH: Solar power companies from around the world are gathering in Riyadh to cultivate new opportunities in Saudi Arabia's path to net zero, during the Solar & Storage Live KSA exhibition.

NEOM Green Hydrogen Co. was one of the major organizations that attended the event.

"It's always inspiring to be surrounded by our industry peers and partners, and I was thrilled to be asked to participate in the keynote interview," said Wesam Al-Ghamdi, CEO of NEOM Green Hydrogen Co.

"I was also very happy to see the enthusiasm around NGHC's project. The excitement about our progress toward becoming fully operational by the end of 2026 was palpable.

"This event shone a spotlight on the impressive initiatives driving the Kingdom and the broader MENA region toward net zero, with both private and government sectors playing pivotal roles."

Solar power has emerged as a leading contender in the race for sustainable energy solutions, as the world shifts towards renewable energy sources.

Al-Ghamdi elaborated on how the solar energy system works at the company. "NGHC doesn't produce its own solar panels, those are produced by our partners at Sungrow," he said.

"Located in NEOM, we benefit from an optimal environment for solar energy generation, with nearly guaranteed sunlight throughout the year.

"Our solar garden will feature an impressive 5.6 million solar panels, generating up to 2.2 GW of solar energy to power our facility."

He added: "Together with our wind farm, this renewable energy infrastructure will enable us to produce up to 600 tonnes of green hydrogen (daily) by the time we are fully operational at the end of 2026."
