• Plug-in solar panels are a popular option for balconies

• They don't require professional installation and can be easily removed

• Plug-in solar panels generally cost between £100 and £600

Balcony solar panels cost less than roof-mounted ones if you opt for a plug-in model, which is the preferred option for most balcony set ups.

In this article, we'll take you through the various ways to use solar panels on balconies, how well they work, and how much they cost. We'll also let you know what balconies are suitable for them.

Want to get solar panels professionally installed on your roof instead? Just fill in our short form, and we'll pass your details along to our network of installers. They'll be in touch with tailored quotes.

Yes, you can put solar panels on balconies. However, most balconies aren't large enough to fit the number of solar panels needed to power a house or an apartment.

That's why most people opt to use plug-in solar panels, also called portable solar panels, on balconies.

These types of panels don't require professional installation. They can be used alongside a portable solar battery, as part of a solar generator system – like the kind people use on camping trips – and some models can be plugged directly into the home's electrical sockets.

You can also install vertical solar panels on the balcony railing that are connected by a professional to the electrical mains. But these types of installations are expensive, so they might not be worth the investment, given the limited space available on most balconies.
