Community solar can allow all households and businesses to access the benefits of ...

Learn how to assess your home's solar potential, options, and needs for going solar. Find resources, tools, and tips for choosing and installing a solar system that suit...

Despite being a leading clean energy technology, there is still a lot of mystery surrounding installing home solar panels. There are several benefits to getting solar panels for your home, like electricity bill savings and powering your home with clean energy.

That being said, residential solar is an investment that costs around \$18,000 and comes with plenty of do's and don'ts. That's why our team of solar experts put together this comprehensive solar panels for home guide to help homeowners like you figure out what you need to know before getting home solar.

You can also watch this video from SolarReviews president and founder Andy Sendy to learn more about home solar.

Homeowners can run their homes using solar power instead of taking energy from the grid, which lowers energy bills and carbon footprints.

A home solar energy system costs about \$13,400 after the 30% federal tax credit and typically saves around \$1,500 annually.

The installation cost of solar panels and electricity bill savings depend on local electricity rates, the solar company you choose, how much sunlight your roof gets, and the rebates and tax incentives available near you.

On average, solar panels pay for themselves after 10 years, making them a worthwhile investment for many homeowners.

Solar panels produce electricity through a process called the photovoltaic effect. Most home solar panels are made of silicon, a semiconductor material. When sunlight hits the silicon in solar panels, the electrons get excited, generating an electric current that goes to a solar inverter and is then used to power appliances and devices.

If your solar panels produce more energy than your home needs, the extra solar energy can be sent to the utility grid or stored in an energy storage system.

Exactly how the solar panel system works with your home and the electric grid will depend on the type of

solar panel system you have. There are three main types of home solar systems: grid-tied, hybrid (or solar-plus-storage), and off-grid. The following videos outline how different solar system types work:
