Ready to get up to 3 quotes for solar, batteries or EV chargers?

Get up to 3 quotes for solar, batteries or EV chargers

How can this be? Threatening to sue an Aussie installer who questioned their reliability is one reason.

A history of frustrating technical service and warranty delays for some installers is another.

In their defence, although issues still persist for some, SolarEdge's attitude and technical service has markedly improved since 2023.

SolarEdge isn't my cup of tea, but I'm happy to recommend them as a long-established brand in Australia that should do the right thing by the consumer. If you want the yield and safety advantages of optimising every panel and don't want the expense of microinverters they are your best choice.

SolarEdge is an Israeli inverter and energy storage company with a unique approach to solar inverters. Normally, power optimisers can be placed on solar panels if desired, but most installations do entirely without them. SolarEdge inverters are different, as they require a SolarEdge optimiser on every panel.

Putting optimisers on each panel provides some advantages:

While their approach is different, SolarEdge inverters currently have a good reputation for reliability and efficiency. They're also backed up with one of the longest inverter warranties around.

SolarEdge was founded in 2006 and began producing solar inverters with optimizers in 2010. While not the largest solar inverter manufacturer in the world, SolarEdge isn't a small company. As at the end of the third quarter in 2024, they claimed to have shipped:

SolarEdge manufactures products in Israel, Vietnam, the USA, Korea, Hungary and Romania. While one of their manufacturing locations used to be China, the firm pulled out of manufacturing in that country in 2023. As at late 2024, Australian stock comes from Vietnam, but sometime in 2025, it will come from SolarEdge's new USA factories.

Safety is a major selling point for SolarEdge. While all solar inverters sold in Australia must have a high level of safety, SolarEdge boasts they have an edge over others.
