By the end of 2024, seven other solar power plants with a total capacity of 5.3 MW will be introduced into operation in the Gorno-Badakhshan Autonomous Region (GBAO), says the press center of the Ministry of Energy and Water Resources (MoEWR). The plants will be installed in the villages of Alichor, Bashgumbez, Bulunkul, Chechekde, Oktal and Mamadzoir of Murgab district and in Khargushi of Ishkashim district.

These areas will be electrified as part of the Tajikistan Rural Electrification Project (TREP).

The World Bank's Board of Executive Directors approved the Tajikistan Rural Electrification Project on July 11, 2019. In total, the project aims to supply electricity in two stages to 62 remote villages in the Gorno-Badakhshan Autonomous Region, most of which are located in Murgab district.

Villages in Murgab district are spaced 150-200 kilometers apart, making the construction of energy facilities in these regions costly. However, alternative energy sources, such as solar and wind power stations, have proven effective in high-altitude areas.

Work on the project began in November 2019 and is expected to be completed by December 2025. The first phase of the project was completed in 2021, during which 27 villages and 1,114 households gained access to electricity through new power lines and transformer stations.
