

Template cite journal wikipedia

Below are examples of how to use various templates to cite a book, encyclopedia, ...

Printable version. From Wikipedia, the free encyclopedia. This template should ...

Cite journal. Template documentation. Templat:Redirect2. This template is used ...

Cite journal is a template which is used for formatting references to articles in magazines and academic journals and for academic papers in a consistent and legible manner. It can be used at the end of the article, directly in the References section. It can also be placed within &lt;ref>...&#47;ref tags for in-line citations. See also: Wikipedia:Footnotes.

last, first; coauthors (date). "[url title]" (in language) (format). journal volume (issue): pages. DOI:doi. ISSN issn. PMID pmid. id. Retrieved on accessdate.&#160;

author (date). "[url title]" (in language) (format). journal volume (issue): pages. DOI:doi. ISSN issn. PMID pmid. id. Retrieved on accessdate.&#160;

Although it may appear redundant to include multiple ids for articles, it is helpful for many editors who only have access to a certain resource. If only one ID is to be included, the DOI should be used, as this is the universal standard preferred by professional publications. Specifying a link as a doi, pmid etc is always preferable to including it as a url parameter, as it makes it clear that the link is accurate and stable, but not necessarily openly accessible.

Whereas if the url had not been specified, then the title is linked to PubMed Central's copy of the article and no duplicate PMC link is shown for compactness:

If the doi link is broken, then use of the doi\_inactivedate parameter unlinks the doi value, indicates when the doi-problem was first noticed, and will also add the page to "Category:Pages with DOIs broken since YYYY":

This template produces COinS metadata; see COinS in Wikipedia for background information.
