The 10 Best Solar Generators (Reviewed by An Electrical Engineer)

Being proactive about your home's electricity doesn't necessarily make you a doomsday prepper -- it just makes you a smart person.

Power outages, especially temporary ones, aren't all that uncommon in rural, suburban and urban areas. So having a backup source of power when your home's main energy supply isn't available can give you real peace of mind and a sense of security.

A solar-powered generator is an excellent way to get reliable electricity in case of an emergency.

According to Chris Giallanza, a merchant at The Home Depot and expert on generators, "One of the biggest benefits is the portability that comes with battery power compared to gas."

"Solar generators can be used indoors for portable power and emergency backup because they don't produce dangerous emissions," Giallanza told the New York Post.

David Wray, an engineer and reviewer who specializes in portable power solutions, told The Post that solar generators tend to be more expensive than gas-powered generators. "But they're silent, or nearly so, which is extremely helpful especially when using them in a campsite setting where there are rules against noisy gas generators," said Wray.

Solar-powered generators can be quite portable, so you can take them with you on a camping trip or to an outdoor party. You can also choose a larger one to function as an emergency supply in case of a power outage. Just note that not all generators come with solar panels, so depending on the model you choose, you may have to buy solar panels separately.

To help you find the best solar-powered generator, Wray and Giallanza rounded up the top models across multiple categories. Check out their FAQ for additional tips on finding the best generator for you.

Wray recommended this as the top choice because he said its manufacturer has an "excellent track-record for support and built-quality." When you're investing in a device that you plan to rely on for something as essential as electricity, then you definitely want to prioritize trustworthy brands.

While this generator is small and lightweight enough to take with you on outings -- it's a little smaller

than a desktop computer tower and weighs 27 pounds -- you can buy additional batteries to increase its capacity and even connect it to your home's power grid to act as a backup power source. If you want a generator that meets your small-time needs right out of the box, and can be expanded into a larger generator system in the future, you can't go wrong with the DELTA 2.
