After a new round of testing, we've made the CyberPower CP1350AVRLCD3 our upgrade pick, and we've added several models to the Other good UPS units section. Our other picks remain solid.

But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage, an uninterruptible power supply, or UPS, is worth the investment.

The CyberPower CP900AVR is the best UPS for people who want to back up a few small electronics--such as a modem, router, PC, external hard drive, or game server--during a blackout lasting up to four hours. It offers many of the same premium features found in pricier models, including battery backup for up to five devices and surge protection on all 10 of its outlets.

We required each model's battery to keep a 300 W load running for at least five minutes, which gives you time to safely shut down devices.

Each model must have eight or more outlets, including at least four battery-backed outlets and with a combined output of at least 300 W.

You should never plug a UPS into an extension cord, as doing so is a fire risk. We required each model's cord to be 5 feet or longer.

Likewise, you should never plug a UPS into a surge protector, so each UPS model must have adequate built-in surge protection.

The CyberPower CP900AVR can cover the basics for most people during common, short-term blackouts. In our tests, it provided enough power to keep a household broadband modem and Wi-Fi router running for four hours, which means you can stay online while the power is off and get in touch with emergency services, follow news and weather changes, or just pass the time on your favorite websites.

It requires no setup aside from plugging it in, and it comes with its own software. It has a user-replaceable battery and includes automatic voltage regulation (an important feature that some cheaper models lack), which can prolong the overall lifespan of the battery and help prevent damage to sensitive electronics.

It backs up five of its 10 outlets with a battery, and it has a 6-foot cord. Its compact shape--about the size of a

Uninterruptible power supply system

jumbo three-ring binder standing upright--makes it relatively easy to stow under a desk or nightstand.
