There are plenty of battery installation companies out there - check out this ...

WASHINGTON, D.C. --The U.S. Department of Energy (DOE) today announced \$15 million for 12 projects across 11 states to advance next-generation, high-energy storage solutions to help accelerate the electrification of the aviation, railroad, and maritime transportation sectors. Funded through the Pioneering Railroad, Oceanic and Plane ELectrification with 1K energy storage systems (PROPEL-1K) program, projects will develop energy storage systems with "1K" technologies capable of achieving or exceeding 1000 Watt-hour per kilogram (Wh/kg) and 1000 Watt-hour per liter (Wh/L), which is a greater than four times energy density improvement compared to current technologies. This effort supports President Biden's 2050 net-zero climate goals.

"Reducing emissions in the transportation sector--which is the largest contributor to the country's greenhouse gas emissions--is critical to achieving President Biden's clean energy and climate goals," said ARPA-E Director Evelyn N. Wang. "ARPA-E is pleased to announce the dozen teams that will pursue exciting new solutions for powering and electrifying heavy-duty transportation."

Managed by the Advanced Research Projects Agency-Energy (ARPA-E), the selected 12 project teams will work on high-energy storage solutions, capable of catalyzing broad electrification of aviation, railroad and maritime sectors:

Access project descriptions for the teams announced today on the ARPA-E website. These selections represent the first phase of an expected two-phase program. Phase 1 is expected to be completed in 18 months following contract completion. If successful, PROPEL-1K technologies will electrify regional flights traveling as far as 1,000 miles with up to 100 people, all North American railroads, and all vessels operating exclusively in U.S. territorial waters.

ARPA-E advances high-potential, high-impact clean energy technologies across a wide range of technical areas that are strategic to America's energy security. Learn more about these efforts and ARPA-E's commitment to ensuring the United States continues to lead the world in developing and deploying advanced clean energy technologies.

Selection for award negotiations is not a commitment by DOE to issue an award or provide funding. Before funding is issued, DOE and the applicants will undergo a negotiation process, and DOE may cancel negotiations and rescind the selection for any reason during that time.

Washington, D.C. residents hit by blackouts from 2008 to 2017.1

D.C.'s solar price drop over the last five years.²

Did you know that the costs of rooftop solar panels and battery storage systems in D.C. are at an all-time low?^{2,3} It could now be incredibly cost-effective if you choose to start your solar journey with a Washington, D.C. solar company like Sunrun. This move can protect your home during power outages, boost your control over electricity bills, and lower your carbon footprint for decades.

As the leading residential solar and energy storage company in the country,⁴ we work so you can experience the peace of mind that solar and storage offer. Find out which Sunrun solar plans, with or without battery storage in Washington, D.C., is the ideal fit for your budget and energy needs.

Lease new Sunrun solar panels in D.C. for little to \$0 down. Lock in predictable monthly rates and stay covered with our industry-leading Sunrun Guarantee.
