This website was proudly designed by Ambrose Marketing

Commercial solar power makes real economic sense for many businesses, as most power is used during the day. In most cases, solar can increase profitability for your business through savings on power bills.

Smaller businesses often use lighting, heating, air conditioning and computers as a consistent base load. Larger companies may have plant and equipment such as cooking, refrigeration or manufacturing machinery. This is the ideal scenario for solar because you get rid of those daytime high energy use costs.

*Sunergy Solar commercial installations often generate a return of around 20% PA, which allows them to effectively pay for themselves within as little as 5 years. After that you have

Does your business have a moderate to heavy daytime power consumption? If so, that's the key to a profitable solar array--because you'll be saving most of your daytime power bill. Our commercial solar installations are saving enough on power bills to effectively pay for themselves within as little as 5 years.

Following a free site visit assessment, we give you an expected ROI by analysing your site, using NIWA's
