Will hitachi batteries fit metabo

As far as compatibility goes, the Metabo HPT MultiVolt battery will power any ...

First, a short history lesson.

Hitachi Power Tools changed their name to Metabo HPT in 2018. After this happened, Metabo issued a statement saying this doesn't affect them at all.

I've searched but no results. Like the title says, I have a bunch of Hitachi tools that take an 18v HXP branded battery. Will the Metabo 18v be compatible? I'm pretty frustrated there's no resources for owners of Hitachi products that I can find

The batteries/chargers are not interchangeable.

BACKWARDS COMPATIBLE: 5.0Ah when used in 18V tools

Metabo HPT introduces a revolutionary cordless-corded power tool solution that meets the power output demands on a jobsite. The MultiVolt Miter Saw can accept a 36V battery OR plug into an outlet with the AC Adapter. This unique platform changes what's possible on the jobsite by offering the power of a corded tool, the freedom of a cordless platform and the choice to operate all MultiVolt tools cordless OR corded.

Experience tells you corded tools have more power than cordless. That may have been true UNTIL NOW. Metabo HPT's MultiVolt platform delivers the power needed to increase productivity and efficiency-regardless if the tools are being operated cordless or corded. When using the MultiVolt AC Adapter, it can be used over long extension cords from a generator with little to no power loss thanks to Metabo HPT's ultra-efficient Brushless motor technology.

Experience a safer jobsite by leaving the cord behind and choosing cordless when a cordless tool makes sense for the application. Go cordless when you don't have access to power and need to be able to move where the job takes you. When you do have access to power, save the battery for later and just plug in.

You're invested in your tools and no one ever wants to change battery platforms. That's why MultiVolt cordless batteries were designed with your 18V tools in mind. The battery delivers 4.0Ah of runtime at 36V in MultiVolt tools. It can also power Hitachi or Metabo HPT 18V cordless tools including cordless nailers for increased flexibility and multipurpose use. When a MultiVolt battery is used with an 18V tool, it generates an impressive 8.0Ah of run time. Continue using your Hitachi or Metabo HPT 18V tools and experience a longer battery life, thanks to MultiVolt battery innovation.

Will hitachi batteries fit metabo

Metabo HPT's MultiVolt platform gives you the choice to go cordless or plug in - all with the same tool eliminating the need to have a corded tool AND a cordless version available on the jobsite. Choose MultiVolt to get the best of both worlds. Set yourself free and work anywhere without the need for corded power- up on a scaffold, building a fence out in a field, or building off the grid. Freedom is portability on the job. Or, if there's power available, insert the MultiVolt AC Adapter and reserve the MultiVolt battery for when you need portability to suit the application.

When you officially register your product with Metabo HPT, you gain a valuable resource. Your registration helps us share information with you about warranties, repairs, and more.
