

Wind chargers for private homeowners

Wind chargers for private homeowners

If you happen to live in an area of the country blessed with a significant amount of wind for most of the year, consider a wind turbine generator. Installing one of these generators for your home may be a cost-effective means to lower electricity bills. They may also help to keep power supplies uninterrupted if and when an outage occurs.

Like solar panels, wind power generators can be excellent, home-based, renewable, energy systems with absolutely zero emissions and pollution. Small wind electric systems can also be used for a variety of other applications for farms and ranches. That's handy since existing mainstream power supplies could be miles away.

This 3,000 Watt 48V Hybrid Solar and Wind Backup Power Kit from Giosolar is less of a home turbine kit than it is an assembly to generate power for remote areas. Good for both residential and commercial use, the 1,000W wind turbine can provide power throughout the day and night, combined with solar panels to augment the charging capabilities of the battery.

The wind turbine generator has five blades rather than the typical three. Starting wind speed can be as low as 2-1/2 meters per second in order to collect electricity. The kit is easy to assemble, features low noise during operation, and is sealed to keep the elements out of the turbine housing.

On the other side, the ETFE flexible solar panel is made of a tough material with a 23.5% efficiency. The panel can be flexed to a maximum of 30 degrees for flush mounting to curved surfaces like the roof of an RV, a boat, camper, tents, or other vehicles.

Other equipment includes a 40A 48 Volt Maximum Power Point Tracking (MPPT) photovoltaic (PV) battery charge controller and a 3,000 Watt Pure Sine Wave Power Inverter with several protection modes: overload, high temp, high and low voltage, short circuit, and more.

This 1,400W Wind Solar Power Kit from Eco-Worthy includes a number of crucial components in order to get your wind turbine operation up and running. The wind turbine generator features three wide 24-inch long blades making for a slightly larger than four-foot diameter. The blades and housing are made of a carbon fiber composite material for excellent durability against inclement weather.

A 24V wind and solar hybrid controller is included in the kit and is rated at an 800 Watt capacity from the wind turbine and 1,000 Watts with the solar panel. The inverter works off from 24V DC power and converts to standard 110V AC electricity. Solar and wind kits seem to be a thing and this kit indeed features a 100 Watt, 12 Volt solar panel that measures roughly 40 inches by 20 inches and is about 1-1/2 inches thick.

Wind chargers for private homeowners

This Pikasola 1000W 24V Wind Turbine Generator Kit looks good and is of high quality but isn't a kit, really, but more of a super component package to anchor whatever wind turbine for home system you're dreaming up. The wind turbine itself works off of a horizontal axis, parallel to the ground.

The components are made of a nylon/carbon fiber material with an approximately 48-inch blade length. The material is waterproof, corrosion-resistant, and lightweight. The turbine generator features a three-phase permanent magnet synchronous motor. The fully integrated voltage regulator automatically shuts down when the battery is fully charged.

The unit has a rotating body with a yaw adjustment system so it positions itself automatically according to the wind direction. The turbine only needs 2-1/2 meters per second wind speed to begin producing energy which is nice.

The Auecoor 1,200 Watt Wind and Solar Power Kit features a solar panel designed to withstand high wind and snow loads and features weather-resistant exterior durability. The frame is made of aluminum so it's naturally corrosion-resistant as well. Conversion efficiency can rise to more than 20% and performs well in low-light environments.
