

# Wind turbine installation near me

Wind turbine installation near me

Karrena USA provides installation, maintenance, and repair services for wind turbines, including specialized technicians and turnkey solutions, for wind farms across North America. Karrena has experience working for clients in the tall structures, utility, and power generation markets for more than 100 years and has a global network of resources of highly trained technical personnel.

We assist our clients to build utility-scale wind turbines and towers in addition to inspection and repair services, including preventative maintenance.

Wind turbines components, both onshore and offshore, suffer from the effects of adverse conditions. Karrena encourages an on-going program of preventive maintenance to ensure no major damage occurs.

Our broad range of experience in use of rope access techniques, self-elevating platforms and drones allows us to provide safe and cost-effective access to the affected areas. Choosing the most suitable access method for each task and location is the key to performing a high-quality repair.

Our technicians are trained to the highest standards in the industry and we use only the best equipment available, all to make sure that every task is performed safely and our "zero incidents" policy is met.

We offer a comprehensive range of wind products and services including:

We also offer a specific and comprehensive range of services for, exterior coatings, steel work and corrosion protection.

Bergey turbines can be purchased through our worldwide network of over 500 Certified Dealers or directly from the factory.

The choice of which option is best for you is basically a trade-off between costs and involvement. The wind system is basically a big Erector Set (TM), but installation does involve obtaining the necessary permits, pouring concrete foundations, constructing a wire run from the tower to your house, installing and connecting the electronics, and assembling and erecting the turbine and tower. BWC has safe turbine erection procedures that allow all of the assembly work to be done on the ground.

On the 10 kW / 15 kW systems a light-duty crane is then used to lift the system to vertical. We have complete installation manuals for each product.

Installations from Certified Dealers are the easiest, fastest, and simplest path to a working wind turbine installation. Certified dealers will provide full warranty coverage for 5-years and they are familiar with the

often difficult permitting processes.

Certified Dealers have typically received factory training on the installation and servicing of Bergey wind energy systems. They can provide a complete "turnkey" installation and will enhance the Bergey warranty by providing on-site service.
